How the list is organised. Words are ranked by how often they occur in the Hebrew Bible and divided into seven sections. Learning section 1 alone accounts for 60.8% of the words on the page; all seven reach 86.8%. Each section is split into lettered subsections of about twenty words — the unit vocabulary quizzes are set from, so revising 2-C here covers exactly what a 2-C quiz can ask.

Coverage is cumulative and counts word occurrences, not distinct words: it is the share of the running text a reader who knows every word through that section would recognise.

Glosses are deliberately short — enough to fix the word, not to replace a lexicon. Generated from the app's own vocabulary deck; the Greek download it sits beside is a published textbook and is a different kind of thing.
